## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - 1. Determining the scope and contents of the prior art.
  - 2. Ascertaining the differences between the prior art and the claims at issue.
  - 3. Resolving the level of ordinary skill in the pertinent art.
  - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 3749

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 4. Claims 1, 26, 28, 29, 31, 32, and 33-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Campbell (6,216,687) in view of Myrick (6,666,206). Campbell discloses at least substantially all of the claimed limitations including, among other things, an air heating conduit 46,48,50, a blower 72, and a filter 90 (actually a catalyst but also acts as a filter see at least col.7, lines 51-54). Nevertheless, Campbell does not specifically recite a filter in the air passage. Myrick however teaches a plenum 10 providing a similar function as that of the instant invention in which a filter 42 is specifically provided at the intake of the plenum so as to keep debris, such as ash and dust, from entering the plenum (see at least col. 4, lines 19-36). While Myrick teaches an outtake filter as well, this does not detract nor make unobvious the use of the intake filter alone. Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporated the filter as taught by Myrick into the invention disclosed by Campbell, so as to keep debris from entering the plenum.
- 5. Claims 27 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Campbell (6,216,687) in view of Morrow (5,656,242) or Campbell (6,216,687) in view of Myrick (6,666,206) and further in view of Morrow (5,656,242). Campbell and Campbell in view of Myrick disclose substantially all of the claimed limitations as discussed above, but do not specifically disclose UV sterilization or ion generation for further air purification. Morrow teaches an air purifier device including, among porous filters. UV sterilization 44 and electrostatic filter 18 in order to purge the air of

Art Unit: 3749

contaminants. Accordingly, it would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the UV and electrostatic filtering taught by Morrow into the inventions disclosed by Campbell or Campbell in view of Myrick, so as to effectively purge the air of contaminants.

## Response to Arguments

- 6. Applicants' arguments with regard to the rejected claims, filed October 27, 2005, have been considered, but are not deemed fully persuasive.
  - a. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Specifically, applicant argues that Myrick does not disclose elements for which Campbell has been cited. Myrick has been cited and relied upon for the use of filters in a plenum. Furthermore, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Myrick is clearly analogous to Campbell, as it provides a plenum for heating room air.

749

Page 5

b. Applicant asserts that Myrick fails to remedy the alleged deficiencies of Campbell because the insert is not a plenum as envisioned by applicant's invention. Nevertheless, a broad interpretation of plenum includes the insert taught by Myrick. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Furthermore, in anticipation of applicant asserting that the insert cannot be read on a plenum because it is not integral with the housing of the fireplace, it has been held that where constituent parts are combined so as to constitute a unitary whole, the unitary whole is deemed integral. *In re Larson*, 144 USPQ 347.

c. Finally, applicant asserts that Myrick cannot obviate the claimed invention because it has another function. This is simply not correct. Regardless of the additional function that the filter of Myrick can provide, it is still capable of performing the claimed function. The fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

business hours.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alfred Basichas whose telephone number is 571 272 4871. The examiner can normally be reached on Monday through Friday during regular

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ehud Gartenberg can be reached on 571 272 4828. The fax phone numbers for the organization where this application or proceeding is assigned are 703 872 9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Tech Center telephone number is 571 272 3700.
